Hamburg, the Aviation region. Expertise from front to rear.

Always looking ahead.
Our region is piloted by an experienced crew, operating on all levels of flight: there is Hamburg Aviation as the global network for our aviation community. There are four universities and the Hamburg Centre of Aviation Training, offering world-class education. And there are Hanse Aerospace & HECAS, giving thrust to our suppliers and service providers.

Home of passenger experience.
No matter where you board an aircraft, there is a good chance the cabin is from Hamburg. Whether it is the overall design, the lavatory or the lighting concept - we have it all! And we show it every year at the Aircraft Interiors Expo, where we also present the „Oscars“ of aircraft cabins, the Crystal Cabin Awards.

Ground expertise since 1911.
Hamburg Airport has been in operation for over 100 years. Today, it is Germany’s 5th largest international airport and the largest in the North. Its 16 million passengers per year stem from a catchment area from our city center well into Denmark.

Hamburg keeps you flying.
Our city is home of the world leader for Maintenance, repair and overhaul of aircraft: Lufthansa Technik. And when it comes to VIP modification or award-winning ideas for passenger comfort, LH Technik will also be your port of call.

Visible, no matter the logo.
Look at any Airbus jet, and you are looking at our region: all Airbus tails are being manufactured in Stade, west of Hamburg. Stade’s CFK Valley is also one of the leading sites for composite technology and a pillar in the development and production of the new Airbus A350.

Printing new ideas.
Whether it is inkjet printing to fuselages, flight acoustics, virtual reality engineering or the factory of the future: tomorrow’s concepts of the aviation industry are being tried out at the high-end infrastructures of ZAL - one of the world’s leading hubs for applied aeronautical research.

The city where planes are born.
The Airbus A320neo is manufactured in, maintained in, and was even first-scheduled into Hamburg: „Our“ A320neo has also become the best-selling airliner in the world. And as 50% of all A320 aircraft are being assembled at the Airbus Finkenwerder site, this plane is one of the reasons that Hamburg today is the world’s 3rd largest site for civil aviation.
